5

WHAT IS CLAIMED IS:

- A method of manufacturing a light-emitting device, comprising the steps of:
 filling an organic electroluminescence material into an evaporation cell; and
 heating the organic electroluminescence material in an inert gas atmosphere to
 form a light emitting layer on a substrate comprising the organic electroluminescence
 material.
- 2. A method of manufacturing a light-emitting device, comprising the steps of: placing in a reaction chamber an evaporation cell containing an organic electroluminescence material and placing a shutter above an orifice of the evaporation cell;

heating the organic electroluminescence material in an inert gas atmosphere; and

opening and closing the shutter to form a light emitting layer on a substrate comprising the organic electroluminescence material.

- 3. A method of manufacturing a light-emitting device, comprising the steps of: filling an organic electroluminescence material into an evaporation cell; and heating the organic electroluminescence material in an inert gas atmosphere to selectively form a light emitting layer on a substrate comprising the organic electroluminescence material.
 - 4. A method of manufacturing a light-emitting device, comprising the steps of: placing in a reaction chamber an evaporation cell containing an organic

.5

electroluminescence material and placing a shutter above an orifice of the evaporation cell;

heating the organic electroluminescence material in an inert gas atmosphere; and

opening and closing the shutter to selectively form a light emitting layer on a substrate comprising the organic electroluminescence material.

- 5. A method of manufacturing a light-emitting device as claimed in claim 1, wherein more than one evaporation cell is provided.
- 6. A method of manufacturing a light-emitting device as claimed in claim 2, wherein more than one evaporation cell is provided.
- 7. A method of manufacturing a light-emitting device as claimed in claim 3, wherein more than one evaporation cell is provided.
- 8. A method of manufacturing a light-emitting device as claimed in claim 4, wherein more than one evaporation cell is provided.
- 9. A method of manufacturing a light-emitting device as claimed in claim 1, wherein the light-emitting device is a device selected from the group of: a personal computer, a video camera, a goggle-type display, a digital camera and cellular phone.
 - 10. A method of manufacturing a light-emitting device as claimed in claim 2,

5

wherein the light-emitting device is a device selected from the group of: a personal computer, a video camera, a goggle-type display, a digital camera and cellular phone.

- 11. A method of manufacturing a light-emitting device as claimed in claim 3, wherein the light-emitting device is a device selected from the group of: a personal computer, a video camera, a goggle-type display, a digital camera and cellular phone.
- 12. A method of manufacturing a light-emitting device as claimed in claim 4, wherein the light-emitting device is a device selected from the group of: a personal computer, a video camera, a goggle-type display, a digital camera and cellular phone.
- 13. A method of manufacturing a light-emitting device as claimed in claim 1, wherein the organic electroluminescence material is a small molecule material.
- 14. A method of manufacturing a light-emitting device as claimed in claim 2, wherein the organic electroluminescence material is a small molecule material.
- 15. A method of manufacturing a light-emitting device as claimed in claim 3, wherein the organic electroluminescence material is a small molecule material.
- 16. A method of manufacturing a light-emitting device as claimed in claim 4, wherein the organic electroluminescence material is a small molecule material.
 - 17. A method of manufacturing a light-emitting device as claimed in claim 1,

wherein the organic electroluminescence material is heated in an inert gas atmosphere at an atmospheric pressure.

- 18. A method of manufacturing a light-emitting device as claimed in claim 2, wherein the organic electroluminescence material is heated in an inert gas atmosphere at an atmospheric pressure.
 - 19. A method of manufacturing a light-emitting device as claimed in claim 3, wherein the organic electroluminescence material is heated in an inert gas atmosphere at an atmospheric pressure.
 - 20. A method of manufacturing a light-emitting device as claimed in claim 4, wherein the organic electroluminescence material is heated in an inert gas atmosphere at an atmospheric pressure.
